

CS 351: Assignment 02

Programming Assignments (90%)

Overview

For this assignment, you will create an **HTML5 form** that allows a user to enter and submit information using a **GET** request. After the form is submitted, a second page will display a summary of the information entered by the user.

The topic and purpose of the form as well as what kind of summary page you have are up to you. Be creative 😊

No seriously, be creative, as your website idea should be reasonably unique across the class. ***Points will be taken off proportional to the number of times I see the same or very similar ideas implemented!***

You do NOT need to store the submitted information.

You also do NOT need to write server-side JavaScript. However, some basic client-side JavaScript on the summary page will be necessary.

Lastly, as before, **you do NOT need to worry about CSS yet.**

Website Structure (15%)

- Website should reside in a folder **assign02/**
 - o All HTML pages should be inside this folder
 - o Any images → in **assign02/images** folder
 - Insofar as you have images, they should have descriptive names
- Add a script to **package.json** to run your website:
 - o **"a02": "serve assign02"**
- You should have **TWO separate HTML pages**:
 - o Main page → should be named **index.html**
 - o Summary page → should be named **summary.html**
- Each page must include:
 - o **<!DOCTYPE html>**
 - o **<html lang="en">**
 - o A **<head>** tag with:
 - **<meta charset="UTF-8">**
 - The viewport **<meta>** element we have been using
 - A meaningful title
 - o A **<body>** tag for content

Form Structure and Controls (30%)

- Include a **<form>** that:
 - o Uses the **GET** method
 - o Has an **action="summary"**
- Form **MUST** include:
 - o At least TWO text-based **<input>** controls
 - One of which should be **type="email"**
 - o At least ONE date or numeric input
 - o At least ONE group of radio buttons
 - o At least TWO checkboxes
 - o At least ONE **<select>** element
 - Must provide at least THREE choices
 - o At least ONE **<textarea>**
 - o A submit button
- Controls should make sense in the context of your form
 - o ***Do NOT add meaningless controls just to meet the requirements***
- Use **<fieldset>** and **<legend>** at least once to appropriately group related controls

Labels and Form Attributes (20%)

- All applicable form controls must have an appropriate **<label>**
 - o Use **for** and **id** to associate labels with their controls
 - o All **id** values must be unique
- All controls whose values should be submitted must have an appropriate **name**
- Radio buttons belonging to the same group should use the same **name**
- Use appropriate form attributes where applicable, such as:
 - o **required**
 - o **minlength / maxlength**
 - o **min / max**
 - o **step**
 - o **pattern**
 - o **placeholder**
 - o **autocomplete**
 - o **inputmode**
- At least THREE controls must make meaningful use of HTML validation
 - o Validation should make sense for the information being requested

Form Submission and Summary Page (25%)

- Form must submit using **GET** to **summary.html**
- **summary.html** must display the information submitted by the user
 - o Display the information in a clear, readable format
 - o Include meaningful labels describing each displayed value

- Do NOT simply display the raw query string
- Use JavaScript and **URLSearchParams** to retrieve the submitted values from the URL
- Display the submitted values by modifying the page using the DOM
- **Include a link on the summary page that allows the user to return to the form**
- **You do NOT need to:**
 - **Write server-side JavaScript**
 - **Use POST**
 - **Store the submitted data**
 - **Use a database**

README (10%)

- Under the "Websites" section, add a subsection "assign02" briefly describing your form/summary and its purpose.

Grading

Your OVERALL assignment grade is weighted as follows:

- 90% - Programming
- 10% - README

I reserve the right to take points off for not meeting the specifications in this assignment description.

The following specific penalties (applied to the WHOLE assignment) can be expected:

Problem	Maximum Penalty
Malformed/incorrect code	60
One GIGANTIC commit for whole assignment	30
Instance of repeated idea from another student	2.5 for every repeat
README update missing/incorrect	10
Missing assignment Git branch	5
Failed to merge assignment branch	5
Wrong names for branch, files, etc.	2 for each
Bad commit messages	2 for each
